

# ThreatDown Mobile Security

Unified protection for corporate-owned or personal devices

## Mobile Devices: The Cybersecurity Gap

Mobile devices are a key part of today's modern business, so smartphones and tablets have become richer targets for exploitation and cyberattacks, especially since employees carry them into places where they can be lost, stolen, or breached through rogue Wi-Fi. Whether employer-provided, employee-owned, or student-owned, mobile devices are tempting targets for malicious threat actors.

Yet, those mobile devices remain under-protected. According to the Forrester report, The State of IoT 2023 Security, employee-owned mobile devices followed by corporate-owned mobile devices are both in the top 3 common targets in external attacks.

## ThreatDown Makes Mobile Security Easy

ThreatDown makes it easy to address security risks with award-winning protection across your mobile and traditional endpoints.

### Unify Endpoint Management

ThreatDown Mobile Security extends our powerful endpoint protection across your mobile devices to substantially strengthen your organization's cybersecurity posture. ThreatDown empowers organizations to save time and resources by centrally managing workstations and mobile devices from the same cloud-native console.

### Enhance Mobile Protection

ThreatDown Mobile Security provides effective protection for iOS, Android, iPadOS, and ChromeOS, guarding against the latest mobile threats such as ransomware, malicious apps, and potentially unwanted programs (PUPs). ThreatDown Mobile Security provides effective protection for iOS, Android, iPadOS, and Chromebook devices, guarding against the latest mobile threats such as malicious apps and files, malvertising, and web-based threats, enabling a secure mobile experience for their employees.

## Challenges

- **Greater risks** – 80% of phishing sites target mobile devices<sup>1</sup>
- **Management complexity** – \$345 in mobile management costs per employee per year<sup>2</sup>
- **Compliance requirements** – 137 countries have legislation to secure protection of data and privacy<sup>3</sup>

## Benefits

**Protect your organization's Android, iOS, and ChromeOS devices with ThreatDown Mobile Security**

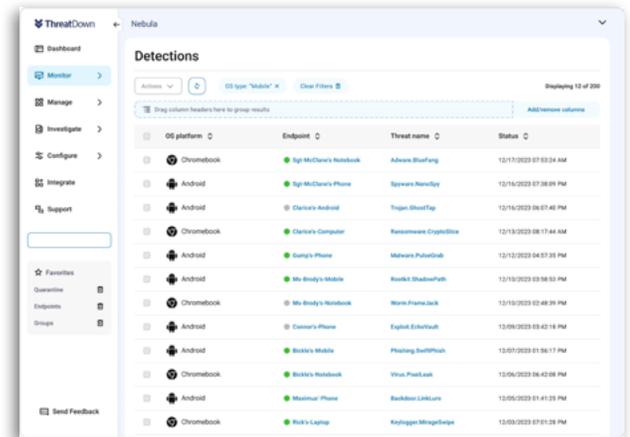

- **Reduce Threats** – Keep threats out of your environment by finding and blocking adware, spyware & more on mobile devices
- **Reduce Complexity** – Set and manage mobile device policies from the same user console as all your other ThreatDown products
- **Stay Compliant** – Reduce the risk of fines and loss of trust for failing to meet government and industry regulations

## Gain Centralized Visibility

Powerful security starts with pervasive visibility. With ThreatDown Mobile Security, you can easily view activity across your iOS, Android, iPadOS, and ChromeOS devices in real time.

- Use a single, unified platform to gain visibility for your traditional and mobile endpoints
- Understand the threats to your mobile devices and mitigate the risks

## Extend Your Security Platform

ThreatDown Mobile Security integrates seamlessly with our cloud-based security platform, Nebula. ThreatDown users (who already use our Nebula platform and management console) can add ThreatDown Mobile Security with a single click from within the console; the product will be up and running within minutes. For new users, our Nebula platform installs in under a day, after which you can add ThreatDown Mobile Security immediately and have it up and running within minutes.

## Features at a glance

	Chromebook	Android	iOS
24/7 real-time protection against emerging threats	✓	✓	✓
Malicious app protection	✓	✓	
Malicious file protection	✓	✓	
Safe web browsing	✓	✓	✓
Block ads and ad trackers	✓		✓
