ThreatDown, powered by Malwarebytes, integration with ConnectWise Asio, a market-leading remote management and monitoring (RMM) platform, helps managed service providers (MSPs) protect their clients from malware so they can recover quickly from infections and maintain business continuity.

**Overview**

ThreatDown, powered by Malwarebytes, is a leader in the endpoint security space for MSPs with a best-in-class endpoint security portfolio. Its integration with ConnectWise Asio syncs data between both solutions so you can deliver strong client endpoint security using the latest ThreatDown scanning and remediation tools. MSPs can also uncover new options for generating revenue by offering endpoint security as a new product and service offering.

**Key Benefits**

- **Boosts** your staff’s productivity and minimizes costs
- **Ensures** your customers’ business continuity
- **Drives** greater value from your ConnectWise investment

**ThreatDown OneView functionality available within the ConnectWise Asio console**
Key capabilities

ConnectWise Asio’s integration with ThreatDown, powered by Malwarebytes, offers a range of essential features that enhance your security and endpoint management capabilities. By combining the power of ThreatDown's OneView console with ConnectWise Asio, these solutions elevate your team's efficiency by automating tasks and fortifying your defense against malicious threats.

Streamlines operations and boosts efficiency
ConnectWise Asio’s integration with ThreatDown, powered by Malwarebytes, reduces the need for manual intervention, saving your staff valuable time. It seamlessly identifies and registers new endpoints without requiring manual input and simplifies the process of connecting customers and sites with ConnectWise Asio, ensuring seamless data synchronization. The integration further optimizes deployment by automatically detecting new endpoints and deploying the ThreatDown agent to them.

Initiates proactive security measures and remediation
ThreatDown, powered by Malwarebytes, integrated with ConnectWise Asio, continuously protects endpoints by automatically scanning for threats and taking remedial actions as needed. Upon deploying and installing a ThreatDown endpoint agent, an immediate scan is triggered. If a threat is detected, ConnectWise Asio initiates a security scan and generates a workflow ticket to document the issue.

Integration benefits

ConnectWise Asio’s integration with ThreatDown, powered by Malwarebytes, offers various advantages to enhance your operations and reduce costs, such as:

• Enhanced process automation
• Elimination of the need to invest in separate systems that demand additional management time
• Support for staff using the familiar ConnectWise Asio interface, eliminating the need to learn a new tool

Ensures uninterrupted business operations for your customers by:

• Reducing scan and remediation time
• Lowering the risk of malware attacks
• Minimizing downtime and the impact of infections, including preventing lateral spread across the network

Drives more significant value from your ConnectWise Asio investment by:

• Ensuring robust security for your customers’ endpoints
• Increasing your customers’ uptime and business productivity
• Providing an additional revenue stream
Best-in-class endpoint security for MSPs

ThreatDown, powered by Malwarebytes, provides a broad range of solutions to support your endpoint protection and remediation needs including:

**ThreatDown Managed Detection and Response (MDR)**
The Managed Detection and Response service is a fully managed 24x7 threat monitoring, proactive threat hunting and rapid response to expedite recovery and reduce downtime.

**ThreatDown Endpoint Detection and Response (EDR)**
Endpoint detection and response (EDR) technology automatically detects, isolates, and remediates new threats for both workstations and servers, providing proactive protection and zero dwell-time in recovering from attacks.

**ThreatDown Endpoint Protection**
Advanced endpoint threat prevention solution for both workstations and servers that uses multiple detection techniques for full attack chain protection.
