

ThreatDown Firewall Management

Easily manage endpoint firewall rules and settings from the same ThreatDown console to enhance security posture.

Overview

Organizations are adopting endpoint firewalls for an additional layer of protection against external and internal threats. However, utilizing Windows Firewall adds complexity requiring the need to use an additional console. Complexity can lead to inconsistent security policies, organizations being more susceptible to attacks, and additional time and effort managing security.

Organizations need simple and effective firewall management. ThreatDown Firewall Management extends our cloud-based ThreatDown security platform to manage Windows Firewall to enhance overall endpoint security to keep end users safe and productive.

ThreatDown Firewall Management Advantages

- ✔ **Ensure consistent firewall security** : IManage firewall policies, rules, and reports directly from the ThreatDown console to deliver consistent policy enforcement and streamline workflows.
- ✔ **Reduce complexity**: Utilize the same lightweight agent and the same console to deploy and configure the firewall, as well as the rest of the ThreatDown solution. No further integrations needed for management and visibility
- ✔ **Support regulatory mandates**: Monitor network traffic to limit applications and top unauthorized access to meet compliance mandates aimed at safeguarding the privacy and data of end users.

Industry Accolades and Peer Reviews

ThreatDown is a leader in security efficacy and customer support as rated by third-party customer reviews and independent rating organizations.

Challenges

- **Need consistent protection** - 88% of organizations experience at least one cyberattck in the past year¹
- **Too much complexity** - 60-70 average number of security tools per company²
- **Need for compliance** - 155 countries have legislation to secure the protection of data and privacy³

Benefits

- **Enhance security** - Block unauthorized access, malware and external networks attacks from compromising the endpoint, all centrally managed
- **Save time & effort** - Manage the firewall with the same agent and console as the rest of the endpoint security stack
- **Satisfy regulatory mandates** - Safeguard endpoints and data by meeting regulatory compliance mandates
